## Oracle Hyperion Analytic Integration Services

---

Many Oracle Hyperion Essbase Analytic Services (Essbase) clients today develop custom application programs necessary to perform formatting of operational data and other automation activities required for the refresh of an Essbase multidimensional database. Hyperion offers Analytic Integration Services to provide an easy to use graphical environment to integrate data or metadata from ERP and CRM applications, relational databases, data warehouses, and legacy transactional systems as well as flat files, spreadsheets, XML documents and Web logs. If you implement a properly design enterprise data warehouse, a key benefit of Analytic Integration Services is the enabling of a true Essbase drill through into the supporting transaction detail; this means that users of a financial data mart could not only see month end balances, but can drill down to the supporting journal entries.

Analytic Vision works to fully automate the refresh of the Essbase Analytics database application (and the supporting data warehouse) using a combination of custom programming, ETL (Extract, Transform, and Load) tools, and Analytic Integration Services.

Extend the value of SAP, Oracle, and Microsoft investments with Essbase Analytic Services (Essbase), Oracle Hyperion Planning and Oracle Hyperion Financial Management.

To help gain the most value from your SAP, Oracle and Microsoft Platforms, Analytic Vision offers services to help you access data natively from these environments for ad hoc query and analysis, Financial Reporting, Dashboards, Advanced Analytics, Financial Planning, and Financial Consolidations. Our team of SAP, Oracle and Microsoft experts can you design the most efficient BI and reporting architecture by leveraging and extending existing investments.
